Dear GeoInnovation Customer,

Tucson Electric Power (TEP) recently announced a new net metering program it is currently offering to all solar electric customers. Under this program, clients will still be allowed to roll forward electrical credits generated by solar month to month. New to this program is the annual reconciliation date, which has been moved from December 31st to the end of September. Any solar credits carried forward into October will be cashed out at the wholesale electricity rate of 2.5 cents/KWH. This change in date came at the suggestion of installers like myself since it allows more solar credit in the fall season to be accumulated for the following summer without an unfavorable credit for your solar electricity of 2.5 cents/KWH.

To participate in this new program you will need to contact TEP customer care at 917-3673, if they have not already contacted you.

GeoInnovation believes this is an improved program, which will allow photovoltaic systems to be sized very close to 100% of a client's electrical needs. In addition, you might consider TEP's new Time-of-Use program "Power Shift" which can now be combined with Net Metering.

Best wishes for a bright 2010!

Sincerely,

A handwritten signature in black ink that reads "George N. Villec". The signature is fluid and cursive.
